AI TRIAGE ASSESSMENT

Summary. Valencia Operations - June 2026 Close Review

Travel & Ent

107% over forecast
(EUR 16k) with z-score
of 4.99

HIGH

Timing. All three benchmarks flag a miss, forecast most damning at plus 107%, meaning no one anticipated this spend.

Likely cause: An unplanned offsite or conference booked in June without forecast capture.. Confidence medium.

Marketing Spend

44% over forecast
(EUR 44k) and 46%
over budget (EUR 45k)

HIGH

Timing. Forecast and budget miss by near-identical amounts, ruling out a known planned event absorbed into the latest view.

Likely cause: An unplanned campaign or annual agency invoice landed in June without forecast update.. Confidence medium.

IT Infrastructure

13.3% over all three
benchmarks by
exactly EUR 6k each

MEDIUM

Permanent. Forecast mirrors the budget gap exactly, confirming the step change has not been reflected in any forward view.

Likely cause: A new software licence or infrastructure contract added since budget was set.. Confidence high.

VARIANCE DETAIL BY ACCOUNT

Marketing Spend actual EUR 143,000

HIGH

vs	Benchmark	Change	%	Material
prior	96,000	+47,000	+49.0%	yes
budget	98,000	+45,000	+45.9%	yes
forecast	99,000	+44,000	+44.4%	yes

Timing. Likely cause: An unplanned campaign or annual agency invoice landed in June without forecast update.
(confidence medium, volatility unusual_for_account)

Travel & Ent actual EUR 31,000**HIGH**

vs	Benchmark	Change	%	Material
prior	16,000	+15,000	+93.8%	yes
budget	18,000	+13,000	+72.2%	yes
forecast	15,000	+16,000	+106.7%	yes

Timing. Likely cause: An unplanned offsite or conference booked in June without forecast capture. (confidence medium, volatility unusual_for_account)

IT Infrastructure actual EUR 51,000**MEDIUM**

vs	Benchmark	Change	%	Material
prior	45,000	+6,000	+13.3%	-
budget	45,000	+6,000	+13.3%	-
forecast	45,000	+6,000	+13.3%	-

Permanent. Likely cause: A new software licence or infrastructure contract added since budget was set. (confidence high, volatility stable_account_moved)

HOW ACCOUNTS ARE FLAGGED

An account is flagged for review when **either** test below is met. Detection is deterministic: the same close data always produces the same flags.

Test	What it catches	How it works
Materiality	Large variances vs prior month, budget, or forecast	Flagged if the percentage clears the account band and the euro change clears the floor, or the euro change is very large on its own. Thresholds are per account: tighter for Revenue and Personnel, looser for discretionary costs.
Unusual for the account	A value out of character with the account's own history	A modified z-score (median and MAD, robust on small samples) versus the trailing 12 months. A normally stable account that moves at all is flagged, because any change to a fixed line is worth checking.

Near-zero bases are handled safely: no percentage is computed against a tiny or zero benchmark, so a small account cannot produce a misleading large percentage. The AI triage that follows adds judgement (priority, timing versus permanent, a likely cause) but never removes a flag.
