

# MONTH-END CLOSE ANOMALY REVIEW

Valencia Operations · Close 2026-06 · 3 accounts flagged

Generated 2026-08-17 · 1,191/930 tokens · AI triage

## AI TRIAGE ASSESSMENT

**Summary.** Valencia Operations - June 2026 Close Review

### Travel & Ent

107% over forecast  
(EUR 16k) with z-score  
of 4.99

HIGH

**Timing.** All three benchmarks flag a miss, forecast most damning at plus 107%, meaning no one anticipated this spend.

**Likely cause:** An unplanned offsite or conference booked in June without forecast capture.. Confidence medium.

### Marketing Spend

44% over forecast  
(EUR 44k) and 46%  
over budget (EUR 45k)

HIGH

**Timing.** Forecast and budget miss by near-identical amounts, ruling out a known planned event absorbed into the latest view.

**Likely cause:** An unplanned campaign or annual agency invoice landed in June without forecast update.. Confidence medium.

### IT Infrastructure

13.3% over all three  
benchmarks by  
exactly EUR 6k each

MEDIUM

**Permanent.** Forecast mirrors the budget gap exactly, confirming the step change has not been reflected in any forward view.

**Likely cause:** A new software licence or infrastructure contract added since budget was set.. Confidence high.

## VARIANCE DETAIL BY ACCOUNT

### Marketing Spend actual €143,000

HIGH

| vs       | Benchmark | Change  | %      | Material |
|----------|-----------|---------|--------|----------|
| prior    | 96,000    | +47,000 | +49.0% | yes      |
| budget   | 98,000    | +45,000 | +45.9% | yes      |
| forecast | 99,000    | +44,000 | +44.4% | yes      |

**Timing. Likely cause:** An unplanned campaign or annual agency invoice landed in June without forecast update.  
(confidence medium, volatility unusual\_for\_account)

**Travel & Ent** actual €31,000**HIGH**

| vs       | Benchmark | Change  | %       | Material |
|----------|-----------|---------|---------|----------|
| prior    | 16,000    | +15,000 | +93.8%  | yes      |
| budget   | 18,000    | +13,000 | +72.2%  | yes      |
| forecast | 15,000    | +16,000 | +106.7% | yes      |

**Timing.** Likely cause: An unplanned offsite or conference booked in June without forecast capture. (confidence medium, volatility unusual\_for\_account)

**IT Infrastructure** actual €51,000**MEDIUM**

| vs       | Benchmark | Change | %      | Material |
|----------|-----------|--------|--------|----------|
| prior    | 45,000    | +6,000 | +13.3% | -        |
| budget   | 45,000    | +6,000 | +13.3% | -        |
| forecast | 45,000    | +6,000 | +13.3% | -        |

**Permanent.** Likely cause: A new software licence or infrastructure contract added since budget was set. (confidence high, volatility stable\_account\_moved)

**HOW ACCOUNTS ARE FLAGGED**

An account is flagged for review when **either** test below is met. Detection is deterministic: the same close data always produces the same flags.

| Test                           | What it catches                                         | How it works                                                                                                                                                                                                                                    |
|--------------------------------|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Materiality</b>             | Large variances vs prior month, budget, or forecast     | Flagged if the percentage clears the account band <b>and</b> the EUR change clears the floor, <b>or</b> the EUR change is very large on its own. Thresholds are per account: tighter for Revenue and Personnel, looser for discretionary costs. |
| <b>Unusual for the account</b> | A value out of character with the account's own history | A modified z-score (median and MAD, robust on small samples) versus the trailing 12 months. A normally stable account that moves at all is flagged, because any change to a fixed line is worth checking.                                       |

Near-zero bases are handled safely: no percentage is computed against a tiny or zero benchmark, so a small account cannot produce a misleading large percentage. The AI triage that follows adds judgement (priority, timing versus permanent, a likely cause) but never removes a flag.

**Effective thresholds for this scan**

| Scope          | % band | Floor (EUR) | Big move (EUR) |
|----------------|--------|-------------|----------------|
| Global default | 10.0%  | 10,000      | 50,000         |
| COGS           | 8.0%   | 15,000      | 60,000         |
| Personnel Cost | 5.0%   | 15,000      | 50,000         |
| Revenue        | 5.0%   | 20,000      | 75,000         |

Modified z-score cutoff: 3.5. Near-zero floor: €1,000.
